Parinaz

Amirkhani

About me:

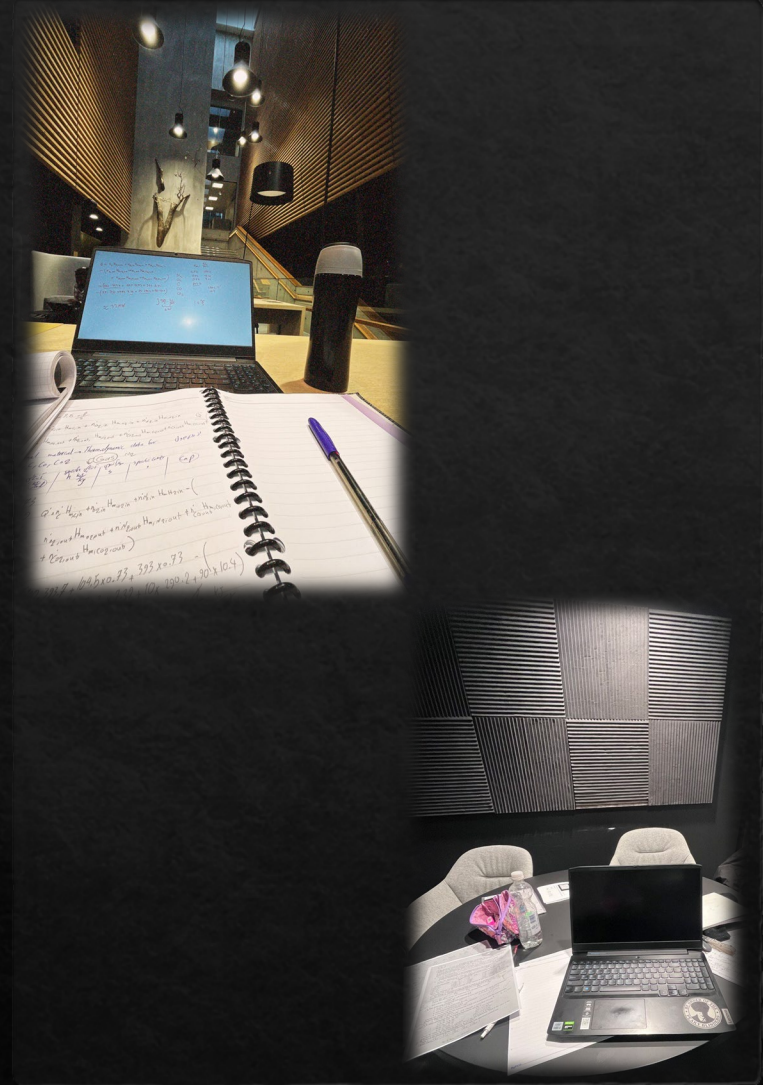

- ◆ I'm Parinaz Amirkhani from Iran, currently in my second year studying Sustainable chemical and process engineering.

Good things about chemical engineering

I chose this program because I'm fascinated by how biomaterials can be used in so many important fields—it feels like I'm studying something that really makes a difference.

Studying in Finland, and especially at Åbo Akademi, has been a wonderful experience. The education system is very student-centered and encourages critical thinking and creativity. Professors are supportive. The international environment also makes it easy to make friends from all over the world.

I really enjoy spending time at Aurum or Arken—those places feel calm and inspiring, perfect for studying or relaxing between classes.

Best places to study

Turku is also such a beautiful city,
full of nature and peaceful spots,
even in winter!
